

MONROE COUNTY FIRE RESCUE — TRAUMA STAR

PRACTICE CHART — FICTITIOUS PATIENT — FOR QI TRAINING ONLY — NOT A MEDICAL RECORD

Practice Chart 4: Scene Call, Pediatric Drowning, Hypoxia (target: 100%)

Date / OCA	2026-07-23 / PC-1004	Aircraft	Trauma Star South
Mission	Scene Call (Air)	Chief Complaint	Pediatric drowning, hypoxia
Pilot	R. Diaz	Nurse / Medic	M. Chu, RN / T. Beck, Paramedic
Pickup / Dropoff	Sombrero Beach (scene)	Nicklaus Children's Hospital	
Dispatch / Wheels Up	1503 / 1509	Land / Depart	1521 / 1529

Flight Narrative

Requested by Paramedic L. Reyes, Engine 14, Monroe County Fire Rescue (requesting agency) for a 6-year-old submersion. Chief complaint: pediatric drowning with respiratory distress; time-sensitive emergency. Upon arrival patient found supine, conscious, coughing, with increased work of breathing; c/o difficulty breathing per parent.

HPI: witnessed submersion approximately 2 minutes, pulled from water by bystanders, brief coughing episode; events prior to arrival: blow-by oxygen by first responders. No medications prior to EMS arrival. Pediatric critical care capability not available in the region; nearest facility lacks pediatric intensive care. Bypassed Fishermen's Hospital: no pediatric ICU capability; flown to Nicklaus Children's, the closest appropriate facility per pediatric destination criteria.

Rotor-wing air transport chosen: ground transport time approximately 118 minutes per Google Maps versus 34 minutes by air; the time difference is clinically significant for a pediatric patient with respiratory compromise. Air transport indicated due to ground EMS limitations for pediatric critical care.

1523 HR 128 RR 32 SpO2 89% — hypoxia noted; high-flow oxygen applied via pediatric NRB at 1524; reassessed 1530 SpO2 96%, work of breathing improved. Temp 97.1 F. Cabin temp 76 F, heater on, patient dried and wrapped in blankets to prevent heat loss. Glucose 108. Pain 2/10 using FLACC scale, reassessed 1/10 at handoff. 1533 HR 118 RR 26 SpO2 97%. 1543 HR 112 RR 24 SpO2 98%; respiratory status stabilizing with ongoing high-flow oxygen therapy.

Max altitude 800 ft. Radio report given to Nicklaus Children's at 1538 with full pediatric report; pediatric team activated by receiving facility. Report given to receiving physician Dr. H. Wu, MD and receiving RN P. Sands; care transferred; patient remains at risk of delayed pulmonary deterioration and requires continued monitoring.
